**DETAILED ACTION**

***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 39-41, 43-68 drawn to a method for producing a library of expressible open reading frames.
- II. Claim 42, drawn to a method for producing a library of transformed cells.
- III. Claims 69 and 70, drawn to a library of expressible ORFs.
- IV. Claims 71-76, drawn to a method for producing a selected library of open reading frames with a 5' and 3' primers.

The inventions are distinct, each from the other because of the following reasons:

Inventions I, II, IV and III are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case product as claimed can be made by another and

Art Unit: 1639

materially different process using different primers using phage display technology. Furthermore, the process claims are different statutory subject matter from the product claim.

Inventions I, II and IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions the different inventions have different modes of operations, process steps and starting materials.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, and the search required for Group I is not required for Group II-IV, specifically with respect to literature searches, restriction for examination purposes as indicated is proper.

Art Unit: 1639

This application contains claims directed to the following patentably distinct species of the claimed invention:

If Group I or II is elected: elect a single species from each subgroup A-G:

A. Enzyme: (recited in claim 50)

1. Vaccinia DNA topoisomerase,
2. lambda integrase
3. FLP recombinase
4. Pl-Cre protein

B. Expression vector:

1. Eukaryotic
2. Prokaryotic

C. Size verification technique

1. PCR
2. Whole lysates of transformed cells

D. Purification Technique(claim 44)

1. Column chromatography
2. Gel electrophoresis

E. Cells (claims 66 and 67)

1. bacteria
2. yeast
3. fungi

Art Unit: 1639

4. insect

5. mammalian (either CHO or *S. cerevisiae*, claim 67)

6. plant

F. Human Proteins recited in claim 61.

G. Expression vectors with or without a tag as recited in claim 68 (i.e., with tag).

If Group III is elected:

Library: a yeast or human proteins (claim 70 i.e., specific human proteins or yeast).

IF Group IV is elected:

Elect the enzyme and expression vector as recited in claims 75 and 76.

Each of the species in each of Subgroups A-G differs in structure, functions and modes of operation. A prior art reference anticipating one reference would not render obvious the other species.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1, 69 and 71 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims

Art Unit: 1639

readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Art Unit: 1639

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
